Lubmitted (SEP-1999) to the EMBL/GenBank/DDBJ databases.

Lubmitted (SEP-1999) to the EMBL/GenBank/DDBJ databases.

Lubmitted (SEP-1999) to the EMBL/GenBank/DDBJ databases.

ALPHA CAN FORM A FUNCTIONE RECEPTOR FOR IL-13. ALSO SERVES AS AN ALTERNATE ACCESSORY PROTEIN TO THE COMMON CYTOKINE RECEPTOR GAMMA CHAIN FOR IL-4 SIGNALING, BUT CANNOT REPLACE THE FUNCTION OF GAMMA-C IN ALLOWING ENHANCED IL-2 BINDING ACTIVITY.

CHAIN FOR IL-4 SIGNALING, BUT CANNOT REPLACE THE FUNCTION OF GAMMA-C IN ALLOHA, AND POSSIBLY OTHER COMPONENTS.

LIJBRALPHA, AND POSSIBLY OTHER COMPONENTS.

SKELETAL MUSCLE AND OVARY; LOWEST LEVELS IN BRAIN, LUNG AND SKELETAL MUSCLE AND BUNDOTHELIAL CELLS.

CHINENTY: CONTAINS I IMMUNOCLOBULIN-LIKE C2-TYPE DOMAIN.

LIBRALTY: CONTAINS I FIBRONECTIN TYPE III-LIKE DOMAIN.

LIBRALPHA, FALSO FORDIN IN FEMBLE FAMILY OF RECEPPORS.

THE BETA CHAIN IS COMMON TO THE IL-3, IL-5 AND GM-CSF RECEPTORS.
SUBCELLULAR LOCATION: Type I membrance protein.
ALTERNATIVE PRODUCTS: 3 ISOSPORMS; MEMBRANCE-BOUND FORM (SHOWN HERE), SOLUBLE FORM S1 AND SOLUBLE FORM S2; ARE PRODUCED BY ALTERNATIVE SPELICING.
TISSUE SPECIFICITY: EXPRESSED ON EOSINOPHILS AND BASOPHILS.
SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.
SIMILARITY: TO IL-13 RECEPTOR ALPHA-2 CHAIN.

Proc. Natl. Acad. Sci. U.S.A. 87:5459-5463(1990).

-!- FUNCTION: HIGH AFFINITY RECEPTOR FOR INTERLEUKIN-3, INTERLEUKIN-5

--- SUBUNT: HETERODIMER OF AN ALPHA AND A BETA CHAIN. THE BETA CHAIN IS COMMON TO THE IL-3, IL-5 AND GM-CSF RECEPTORS.

--- SUBCELLULAR LOCATION: Type I membrane protein.

--- SUBCELLULAR LOCATION: Type I membrane protein.

--- SIMILARITY: CONTAINS 2 FIRBONECTIN TYPE III-LIKE DOMAINS.

--- SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.

```
The invention concerns an isolated canine protein, preferably canine immunoglobulin G (IgG) protein or canine interleukin-13 (IL-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, the nucleic acids encoding them, antibodies and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of regulators are useful for treating canine grd (heavy and/or Iljaht chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulators are useful for the immune response of an animal (e.g. by gene therapy). The present sequence encodes a protein of the invention.
                                         protein useful for regulating
                     Novel isolated canine protein, preferably canine immunoglobulin G
protein or canine interleukin-13 receptor protein useful for regulati
immune response of an animal and for developing regulatory compounds
                                                                                                                                 Claim 19; Page 173-175; 221pp; English
                                                    protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                òγ
                                                                                                                                                                                                                     The invention concerns an isolated canine protein, preferably canine immunoglobulin G (1gG) protein or canine interleukin.13 (II-13)
receptor protein, the nucleic acids encoding them, antibodies
raised against them, fusion proteins between the 1gG and IL-13R proteins
and methods of isolating regulators of them. The regulators are useful
for regulating an immune response in a canine. The proteins useful to
develop regulatory compounds including inhibitors and activators that,
when administered to a canine in an effective manner, are capable of
protecting canine from disease mediated by IL-13Ralpha or IL-13. The
regulators are useful for treating canine 1gG (heavy and/or light chain)
and/or canine IL-13R mediated responses. The molecules of the invention
are useful to regulate the immune response of an animal (e.g. by gene
therapy). The present sequence is the reverse complement of a cDNA
cnocding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                           The invention concerns an isolated canine protein, preferably canine immunoglobulin G (IgG) protein or canine interleukin-13 (IL-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, the nucleic acids encoding them, antibodies and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IGG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene
                                                                                Dog; interleukin-13 receptor alphal; interleukin-13 receptor alpha2; IL-13Ralpha1; IR-13Ralpha2; Immunoglobulin heavy chain; IgG FC; Immunoglobulin light chain; lambda; ss; immunosuppressive; gene therapy;
                                                                                                                                                                                                                                                                                                                Novel isolated canine protein, preferably canine immunoglobulin G
protein or canine interleukin-13 receptor protein useful for regulating
immune response of an animal and for developing regulatory compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IGG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene therapy). The present sequence is the reverse complement of a cDNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                          The invention concerns an isolated canine protein, preferably canine receptor protein, the nucleic acids encoding them, antibodias raised against them, the nucleic acids encoding them, antibodias raised against them, the nucleic sold sending them, antibodias and sether them, the nucleic sold sending them. The proteins useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine TgG (heavy and/or Ilight chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulators are useful for sequence encodes a protein of the invention.
                                                                                                                                                                                                                                                                                                                              Novel isolated canine protein, preferably canine immunoglobulin g
protein or canine interleukin-13 receptor protein useful for regulating
immune response of an animal and for developing regulatory compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            546

The invention concerns an isolated canine protein, preferably canine immunoglobulin G [193] protein or canine interleukin 13 [II-13] receptor protein, the nucleic acids encoding them, antibodies raised against them, fusion proteins between the 193 and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralbah or IL-13. The regulators are useful for treating canine 193 (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention can second to regulate the immune response of an animal (e.g. by gene therapy). The present sequence is the reverse complement of a cDNA encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                Novel isolated canine protein, preferably canine immunoglobulin G
protein or canine interleukin-13 receptor protein useful for regulating
immune response of an animal and for developing regulatory compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1095 TCTATGCTTTCAAATGCTGAGATAAAAGTTAATCCTCCTCAGGATTTTGAGATAGTGGAC 1036

The invention concerns an isolated canine protein, preferably canine immunoglobulin G (IgG) protein or canine interleukin-13 (IL-13) (IC-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, fusion proteins between the IgG and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to ragulate the immune response of an animal (e.g. by gene therapy). The present sequence encodes a protein of the invention.
                                                  Novel isolated canine protein, preferably canine immunoglobulin G protein or canine interleukin-13 receptor protein useful for regulating immune response of an animal and for developing regulatory compounds
                                                                                                                                                                  Claim 19; Page 184-185; 221pp; English.

The invention concerns an isolated canine protein, preferably canine immunoglobulin G (IgG) protein or canine interlewin-13 (IL-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, fusion proteins between the IgG and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IgG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene therapy). The present sequence is the reverse complement of a cDNA encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Oog; interleukin-13 receptor alphal; interleukin-13 receptor alpha2; IL-13Ralpha1; IR-13Ralpha2; Immunoglobulin heavy chain; IgG Fc; Immunoglobulin light chain; lambda; ss; immunosuppressive; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated canine protein, preferably canine immunoglobulin G protein or canine interleukin-13 receptor protein useful for regulating immune response of an animal and for developing regulatory compounds -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Canine IL-13R extracellular domain cDNA nCaIL-13Ralpha2 954 complement.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention concerns an isolated canine protein, preferably canine immunoglobulin G (IgG) protein or canine interleukin-13 (IL-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, tusion proteins between the IgG and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Rapha or IL-13. The regulators are useful for treating canine IGG (heavy and/or light chain and/or canine IL-13R mediated responses. The molecules of the invention
                                                                                                                                                                                                                                 Dog; interleukin-13 receptor alphal; interleukin-13 receptor alpha2; IL-13Ralpha1; IR-13Ralpha2; Immunoglobulin heavy chain; IgG FC; immunoglobulin light chain; lambda; ss; immunosuppressive; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated canine protein, preferably canine immunoglobulin {\tt G} protein or canine interleukin-13 receptor protein useful for regulating immune response of an animal and for developing regulatory compounds -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          accatcattaccaagaatctacattacaaagatgggtttgatcttaacaaaggtattgaa 486

The invention concerns an isolated canine protein, preferably canine immunoglobulin G (IgG) protein or canine interlew(in-13 [IL-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, tusion proteins between the igG and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene therapy). The present sequence is the reverse complement of a cDNA encoding a protein of the invention.
                                                                                                                                                                                                                                                                         Novel isolated canine protein, preferably canine immunoglobulin G protein or canine interleukin-13 receptor protein useful for regulating immune response of an animal and for developing regulatory compounds -

raised against them, fusion proteins between the IgG and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IgG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1026
